Johannes for RagTime

**RAGTIME**

Leaflet Printing of RagTime Documents

Johannes is an add-on for Rag-Time which simplifies booklet creation by automatically combining two pages on one sheet. It also rearranges the pages of a RagTime document during printing in a way that all recto and verso pages fit together. This optimizes the output, saves time, and is more economical.

Use cases

The RagTime Johannes extension is ideal to create:
– Booklets
– Corporate brochures
– Flyers
– Church bulletins
– Theater programs

Easy output

The "Print as Booklet" option in the extended print dialog allows easy printing of booklets within RagTime. Pages are automatically combined on the sheet, with optional registration marks. Works with any printer, alternatively outputs PDF files via the printer driver. Johannes supports automatic or manual duplex (two-sided) printing.

Licensing

Johannes is licensed on a per-RagTime user basis. Licenses (serial number with code) can be ordered for a specific number of users.

Features & Benefits

Ease of use
- No imposition knowledge required
